NOTES (ALPHABETICAL)

Standard Deviation is a statistical measure of the historical volatility of a mutual fund or portfolio. Beta is a historic measure of a fund's relative volatility, which is one of the measures of risk; a beta of 0.5 reflects 1/2 the market's volatility as represented by the Fund's primary benchmark, while a beta of 2.0 reflects twice the volatility. Debt/capital ratio is a measure of a company's financial leverage, calculated as the company's debt divided by its total capital. Morningstar Diversified Emerging Markets Category is comprised of funds with at least 50% of stocks invested in emerging markets. MSCI Emerging Markets Index is a free float adjusted market capitalization index. It includes market indexes of Brazil, Chile, China, Colombia, Czech Republic, Egypt, Hungary, India, Indonesia, Israel, Korea, Malaysia, Mexico, Morocco, Peru, Philippines, Poland, Russia, South Africa, Taiwan, Thailand, and Turkey. ROIC (return on invested capital) measures how effectively a company uses the money invested in its operations, calculated as a company's net income minus any dividends divided by the company's total capital.

Unmanaged index returns assume reinvestment of any and all distributions and, unlike fund returns, do not reflect fees, expenses or sales charges. Investors cannot invest directly in an index.
