A negative alpha shows that the performance was less than expected given the risk. **Information ratio** is the measurement of the performance returns of a portfolio against the performance volatility of an index or benchmark. The information ratio is generally used as a gauge to measure the ability of a portfolio to generate excess returns of the index or benchmark. **Sharpe ratio** is a calculation that reflects the reward per each unit of risk in a portfolio. The higher the ratio, the better the portfolio's risk-adjusted return is. **Beta** is a historic measure of a fund's relative volatility, which is one of the measures of risk; a beta of 0.5 reflects 1/2 the market's volatility as represented by the Fund's primary benchmark, while a beta of 2.0 reflects twice the volatility. **Debt/capital ratio** is a measure of a company's financial leverage, calculated as the company's debt divided by its total capital. **Morningstar World Stock Category** is comprised of international funds having more than 20% of stocks invested in the United States. **MSCI ACWI Growth** is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of developed and emerging markets. **MSCI World Index** is a market capitalization weighted index composed of companies representative of the market structure of developed market countries in North America, Europe, and Asia/Pacific region. **PEG ratio** is a stock's price/earnings ratio divided by estimated earnings growth rate in the next year; a lower PEG indicates that less is being paid for each unit of earnings growth. **ROIC (return on invested capital)** measures how effectively a company uses the money invested in its operations, calculated as a company's net income minus any dividends divided by the company's total capital.

Unmanaged index returns assume reinvestment of any and all distributions and, unlike fund returns, do not reflect fees, expenses or sales charges. Investors cannot invest directly in an index.
