

CALAMOS GLOBAL FUNDS PLC

# Emerging Markets Fund

# CALAMOS<sup>®</sup>

## INVESTMENTS

### OVERVIEW

The fund invests in growth companies globally, emphasising those with revenue streams derived within or from emerging markets. The fund is designed to actively manage risk over full market cycles.

### KEY FEATURES

- » **Active risk management** aims to generate alpha with less downside risk than the benchmark and peers.
- » **Stresses company fundamentals**, including strong and accelerating earnings growth and solid returns on invested capital.
- » **Seek global growth companies** that may benefit from long-term secular themes in emerging markets such as the rise of the EM consumer.

### PORTFOLIO FIT

Because of its focus on risk management, the fund can serve as a long-term emerging market allocation.

## An Active Approach to Emerging Markets Investing

Calamos Emerging Markets Fund utilizes an active, risk-aware approach with the goal of accessing superior long-term growth potential in emerging markets while also mitigating the downside risks associated with these inherently volatile regions.

Alpha is the measurement of performance on a risk adjusted basis. A positive alpha shows that performance of a portfolio was higher than expected given the risk. A negative alpha shows that the performance was less than expected given the risk. Beta is a historic measure of a fund's relative volatility, which is one of the measures of risk; a beta of 0.5 reflects 1/2 the market's volatility as represented by the Fund's primary benchmark, while a beta of 2.0 reflects twice the volatility. Debt/capital ratio is a measure of a company's financial leverage, calculated as the company's debt divided by its total capital. Information ratio is the measurement of the performance returns of a portfolio against the performance volatility of an index or benchmark. Information ratio is generally used as a gauge to measure the ability of a portfolio to generate excess returns of the index or benchmark. R-squared is a mathematical measure that describes how closely a security's movement reflects movements in a benchmark. ROIC (return on invested capital) measures how effectively a company uses the money invested in its operations, calculated as a company's net income minus any dividends divided by the company's total capital. Sharpe ratio is a calculation that reflects the reward per each unit of risk in a portfolio. The higher the ratio, the better the portfolio's risk-adjusted return is. Standard deviation is a statistical measure of the historical volatility of a mutual fund or portfolio, usually computed using 36 month returns. Tracking error is a
