

CALAMOS GLOBAL FUNDS PLC

Emerging Markets Fund

MORNINGSTAR RATING™†

Among 1,881 Emerging Markets Equity funds The fund's Class I U.S. \$ Accumulating shares received 3 stars for 3 years and 4 stars for 5 years out of 1,881 and 1,387 USD Emerging Markets Equity funds, respectively, for the period ended 28/2/18

OVERVIEW

The fund invests in growth companies globally, whose principal activities are in developing markets or are economically tied to developing market countries that we believe offer the best opportunities for emerging market growth.

KEY FEATURES

- » Stresses company fundamentals, including global presence, strong revenue and earnings growth, solid returns on invested capital, and lower debt-to-capital levels
- » Actively seeks growth opportunities by investing in equities, with at least 80% emerging market exposure
- » Draws upon decades of Calamos experience investing globally through multiple economic, market and credit cycles

PORTFOLIO FIT

This actively managed fund complements EM strategies with less pronounced growth orientations, such as those that more closely track the broad EM equity market.

An Active Approach to Emerging Markets Investing

Calamos Emerging Markets Fund utilizes an active, risk-aware approach with the goal of accessing superior long-term growth potential in emerging markets while also mitigating the downside risks associated with these inherently volatile regions.

MSCI Emerging Markets Index is a free float-adjusted market capitalization index that is designed to measure equity market performance of emerging markets. The index is calculated without dividends, with net or with gross dividends reinvested, in both US dollars and local currencies. Unmanaged index returns assume reinvestment of any and all distributions and do not reflect any fees, expenses or sales charges. Investors cannot invest directly in an index.

Debt/capital ratio is a measure of a company's financial leverage, calculated as the company's debt divided by its total capital. ROIC (return on invested capital) measures how effectively a company uses the money invested in its operations, calculated as a company's net income minus any dividends divided by the company's total capital. Alpha is the measurement of performance on a risk adjusted basis. A positive alpha shows that performance of a portfolio was higher than expected given the risk. A negative alpha shows that the performance was less than expected given the risk. Beta is a historic measure of a fund's relative volatility, which is one of the measures of risk; a beta of 0.5 reflects 1/2 the market's volatility as represented by the Fund's primary benchmark, while a beta of 2.0 reflects twice the volatility. Sharpe ratio is a calculation that reflects the reward per each unit of risk in a portfolio. The higher the ratio, the better the portfolio's risk-adjusted return is. Standard deviation is a measure of volatility. R-squared is a mathematical measure that describes how closely a security's movement reflects movements in a benchmark. Information ratio is the measurement of the performance returns of a portfolio against the performance volatility of an index or benchmark. Information ratio is generally used as a gauge to measure the ability of a portfolio to generate excess returns of the index or benchmark. Tracking error is a measure of the volatility of excess returns relative to a benchmark.
