

Emerging Market Equity Strategy

CALAMOS[®]
INVESTMENTS

Market Overview

Emerging markets generated leading returns in the quarter, as the MSCI Emerging Markets Index gained 8.04%. Emerging markets posted their first monthly decline this year in September, but outperformed developed markets for the quarter (MSCI World +4.96%), supported by strong earnings growth, improving economic data, and appreciating currencies. In terms of key macro data, China's manufacturing and services PMI data continued to show broad expansion through a combination of domestic demand and increased exports. China's GDP increased 6.9% in the last report, similar to the positive trend in retail sales, which reflects the transition toward consumption and services. India's economy grew 5.7% in the last quarter, reflecting some deceleration due to lower consumer spending and investment following last year's demonetization policies. However, recent data on India manufacturing showed expansion for two months, possibly indicating the disruption caused by the goods and services tax was temporary. Stocks in Brazil rallied in the quarter as the recent upturn in growth benefited from a rebound in consumer spending, lower unemployment and a more settled political environment for now. Russia also outperformed thanks to stabilizing oil prices and better economic data. Russia retail sales, buoyed by positive consumer confidence, increased 1.9% in the latest figures, ahead of estimates and the highest since

2014. Korean stocks trailed other markets as investors reacted to heightened tensions with North Korea and multiple missile tests, though shares managed modest gains owing to rising export demand and positive business confidence, in addition to the more stable leadership of President Jae-in following a corruption scandal. The top-performing EM countries in the period included Brazil (+23.00%) and Russia (+18.07%), while the lagging performers included Pakistan (-16.27%) and Greece (-12.10%).

Performance Review

The strategy delivered a strong double-digit return and outperformed the MSCI Emerging Markets index during the quarter. Performance benefited from strong security selection, with broad-based gains across sectors. Our investments in higher-quality, growth-oriented businesses performed well in the period as markets rewarded leading fundamentals. From a geographic perspective, portfolio holdings in Emerging Asia contributed the most by virtue of leading earnings growth and positioning in key industries, while holdings in Emerging Europe also added value to performance.

During the quarter, the areas that had the most significant impact on performance were:

Financials. The portfolio's selection in financials added the most value to performance in the quarter. In particular, holdings in the diversified banks industry outpaced those in the index. We have a selective, but relatively even-weight stance with holdings positioned to benefit from improving business fundamentals and higher real interest rates in many markets.

Industrials. The portfolio's relative security selection in industrials also contributed to performance. Holdings in the construction machinery and heavy trucks industry were especially helpful given strong demand fundamentals. We see increased opportunities in the sector and own positions in machinery, construction & engineering, and defense, reflecting a pickup in global demand and specific cyclical growth opportunities in emerging markets.

Real estate. The portfolio's relative security selection in the real estate sector detracted value. Specifically, holdings in the real estate development industry did advance but lagged the robust rally in higher-beta index positions. We see increased opportunities in the sector based on our view of valuations and select growth catalysts.

Energy. The portfolio's underweight to energy also detracted value in the period. In addition, holdings in the oil and gas refining and marketing industry underperformed due to challenging fundamentals and excess global supply. We take a selective stance in energy, weighing some stabilization in prices against excess inventories relative to global demand.

Positioning and Portfolio Changes

Our positioning favors economies benefiting from domestic demand trends, pro-growth fiscal reforms, and a blend of secular demand and more cyclical opportunities. We favor investments in China, India, South Korea and select opportunities in Brazil, Mexico, South Africa, Russia and the Philippines.

We maintained relatively stable sector weights during the quarter with changes at the margin driven mainly by bottom-up security rationale. We added weight modestly to real estate and industrials, while trimming exposure to consumer staples and discretionary. From a sector perspective, the largest portfolio weights are in technology, financials and consumer discretionary, while the portfolio has an underweight stance in utilities, health care and traditional telecom services.

Outlook

We have a positive view of investment opportunities in emerging markets. A pickup in global growth conditions, positive capital flows and higher corporate earnings are supporting emerging market assets. Emerging market valuations and growth characteristics are favorable and have the potential to benefit from an enhanced focus on corporate fundamentals versus broader macro topics. While we do not expect a rapid acceleration in economic growth, we see improving trends in emerging market data and perhaps a greater appreciation of the divergent conditions among economies. We have also seen notable improvements in current accounts, fiscal deficits and currencies

across many EM economies, which has reduced the vulnerability to global interest rates and capital flows.

Companies with higher-quality fundamentals and sustainable growth characteristics are outperforming within the emerging markets index this year. We expect this trend to persist, in contrast

to last year when most of the gains in emerging market equities were driven by a relatively narrow set of lower-quality, higher-beta companies. We believe our active and risk-aware investment approach positions us to take advantage of the improving opportunity set and equips the portfolio with potential downside resilience should volatility spike in global markets.
