

Market Neutral Income Fund

Second Quarter 2014 Report

CALAMOS®

MORNINGSTAR OVERALL RATING™¹

among 94 Market Neutral Funds
The fund's load-waived Class A shares (CVSIX.lw) received 5 stars for 3 years, 5 stars for 5 years, and 4 stars for 10 years out of 94, 56, and 24 Market Neutral funds, respectively, for the period ended 6/30/14.

OVERVIEW

The fund's core market strategies include covered call writing and convertible arbitrage, complemented by an opportunistic sleeve. Together, these strategies are intended to provide the fund with an enhanced potential for risk-managed returns due to their differing responses to volatility.

KEY FEATURES

- » **One of the first alternative mutual funds**, capitalizing on experience in the convertible space going back more than three decades
- » **Low correlation** with most fixed income benchmarks
- » **Risk management is a primary focus**, as the three primary strategies are managed together with the intent of maximizing risk/reward characteristics

FUND TICKER SYMBOLS

Key Drivers of Performance

- » The fund's returned 1.26% (A shares at NAV) in the second quarter, driven by strong equity returns.
- » With the covered call strategy, the positive return of the S&P 500 (+5.23%) was supportive to the covered call strategy performance in the quarter as the value of our equity basket increased.
- » In the convertible arbitrage strategy, a portion of convertibles were not hedged, which allowed them to increase along with underlying stocks.
- » We expect volatility to rise from historically low levels, whether from geopolitical events or continued speculation on the Federal Reserve's interest rate policy. We believe that the fund can perform well in periods of increasing volatility.

¹ Please see strategy definitions on page 4.

The Barclays U.S. Government/Credit Bond Index and Citigroup 30-Day T-Bill Index return "Since A share Inception" start date is 8/31/90. The Barclays U.S. Government/Credit Bond Index and Citigroup 30-Day T-Bill Index return "Since I share Inception" start date is 4/30/00.

Performance data quoted represents past performance, which is no guarantee of future results. Current performance may be lower or higher than the performance quoted. The principal value of an investment will fluctuate so that your shares, when redeemed, may be worth more or less than their original cost. Load-adjusted returns take into account the Fund's maximum 4.75% front-end sales load. You can obtain performance data current to the most recent month end by visiting www.calamos.com.

Performance may reflect waivers or reimbursement of certain expenses. Calendar year returns measure net investment income and capital gain or loss from portfolio investments for each period specified. Average annual total return measures net investment income and capital gain or loss from portfolio investments as an annualized average. All performance shown assumes reinvestment of dividends and capital gains distributions. In calculating net investment income, all applicable fees and expenses are deducted from the returns.

The offering price for Class I shares is the NAV per share with no initial sales charge. There are no contingent deferred sales charges or distribution or service fees with respect to Class I shares. The minimum initial investment required to purchase each Fund's Class I shares is \$1 million. Class I shares are offered primarily for direct investment by investors through certain tax-exempt retirement plans (including 401(k) plans, 457 plans, employer-sponsored 403(b) plans, profit sharing and money purchase pension plans, defined benefit plans and non-qualified deferred compensation plans) and by institutional clients, provided such plans or clients have assets of at least \$1 million. Class I shares may also be offered to certain other entities or programs, including, but not limited to, investment companies, under certain circumstances.

Calamos Market Neutral Income Fund Second Quarter 2014 Report

Attribution Analysis

QUARTERLY REVIEW

Covered Call Strategy. Strong equity returns, including the S&P 500 Index return of 5.23%, supported the covered call strategy performance in the second quarter as the value of the fund's equity basket increased. The equity basket performed in line with the S&P 500, with the tracking error of the equity basket well under the goal of 0.5%. Volatility fell significantly during the quarter, which suppressed price of call options we sold during the quarter.

Convertible Arbitrage. Strong equity performance aided the convertible arbitrage strategy. As the price of the underlying stock moves higher, we adjust our hedging as part of executing the strategy. In between adjustments made, the portfolio benefitted from a portion of unhedged upside.

Convertibles cheapened during the second quarter, based on proprietary Calamos research models. The overall convertible market was estimated to trade at about a 1.5% discount to fair value at the end of the quarter versus the 1.1% discount reported at the end of March. Historically, convertibles have traded in a normal range of 2.5% overvalued to 1.5% undervalued.

As mentioned above, volatility fell significantly during the quarter. The drop in volatility held back performance to the extent that lower volatility suppressed the values of convertibles, which include an option component that is affected by volatility.

The yield curve steepened during the quarter as yields at the longest points on the curve increased most. With the average duration of the convertibles in the portfolio under three years, the lower interest rates helped support the bond component to a small extent. At the same time, the near zero Fed Funds Rate continued to provide a headwind to the convertible arbitrage strategy. The low interest rate environment has meant that the fund did not received short interest credit from the proceeds of the short sale of common stock in the portfolio. Lower credit spreads also supported convertibles.

Long/Short Strategy. We incepted the Long/Short Equity Market Neutral portion of the portfolio in early January, 2013. The strategy invests long or short in equity names based on our view of their prospects. The long-short strategy return was held back in the second quarter as growth equities lagged and the long selections favored names with growth attributes. At the same time, several of the short positions were less growth-oriented. Despite the lagging performance, we believe the strategy aids in our ability to manage risk in the fund because of its low correlations to the other two strategies.

OUTLOOK

We expect volatility to rise from historically low levels, whether from geopolitical events or continued speculation on the Federal Reserve and interest rates. We view this environment as favorable to the fund as it derives benefits from "volatility in volatility," whether from the rebalancing opportunities higher volatility provides to convertible arbitrage or the potential to receive higher call premiums in the covered call allocation.

Within the portfolio allocation, we continue to see two opportunities for investors in the Market Neutral Income Fund. As the fund has lower correlations to other asset classes, portfolios should benefit as the fund can provide stability in a market environment that turns increasingly volatile. The fund also provides many of the same attributes investors have sought in bonds in terms of its stable return and low risk attributes but with one important difference – a lack of sensitivity to rising interest rates.

B	7.2
CCC and below	1.4
Unrated Securities	40.2

‡ Bond credit quality allocation reflects the higher of the ratings of Standard & Poor's Corporation; Moody's Investors Service, Inc. or Fitch, Inc. Ratings are relative, subjective and not absolute standards of quality, represent the opinions of the independent, Nationally Recognized Statistical Rating Organizations (NRSRO), and are adjusted to the Standard & Poor's scale shown. Ratings are measured using a scale that typically ranges from AAA (highest) to D (lowest). In addition, CAL has assigned its own ranking to the "unrated bonds," based on its fundamental and proprietary investment process and has years of experience actively managing risk. The security's credit rating does not eliminate risk. The table excludes equity securities, cash and cash equivalents. For more information about securities ratings, please see the Fund's Statement of Additional Information at calamos.com. Additional information on ratings methodologies are available by visiting the NRSRO websites: www.standardandpoors.com, www.moody's.com, and www.fitchratings.com.

Morningstar Ratings™ are based on risk-adjusted returns and are through 6/30/14 for load-waived Class A shares (CVSIX.lw) and will differ for other share classes. Morningstar Ratings based on a risk-adjusted return measure that accounts for variation in a fund's monthly historical performance (reflecting sales charges), placing more emphasis on downward variations and rewarding consistent performance.

Within each asset class, the top 10%, the next 22.5%, 35%, 22.5%, and the bottom 10% receive 5, 4, 3, 2, or 1 star, respectively. Each fund is rated exclusively against U.S. domiciled funds. The information contained herein is proprietary to Morningstar and/or its content providers; may not be copied or distributed; and is not warranted to be accurate, complete or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Source: © 2014 Morningstar, Inc. All Rights Reserved.

Morningstar ratings shown are for load-waived shares that do not include any front-end sales load. Not all investors have access to or may invest in the load-waived share class shown. Other share classes with front-end or back-end sales charges may have different ratings than the ratings shown. Additionally, some A-share mutual funds for which Morningstar calculates a load-waived A-share star rating may not waive their front-end sales load.

Calamos Market Neutral Income Fund Second Quarter 2014 Report

Term Definitions

Alpha is the measurement of performance on a risk adjusted basis. A positive alpha shows that performance of a portfolio was higher than expected given the risk. A negative alpha shows that the performance was less than expected given the risk. **Beta** is a historic measure of a fund's relative volatility, which is one of the measures of risk; a beta of 0.5 reflects 1/2 the market's volatility as represented by the Fund's primary benchmark, while a beta of 2.0 reflects twice the volatility. **Sharpe ratio** is a calculation that reflects the reward per each unit of risk in a portfolio. The higher the ratio, the better the portfolio's risk-adjusted return is. **Annualized standard deviation** is a statistical measure of the historical volatility of a mutual fund or portfolio. **R-squared** is a mathematical measure that describes how closely a security's movement reflects movements in a benchmark. **Upside capture ratio** measures a manager's performance in up markets relative to the named index itself. It is calculated by taking the security's upside capture return and dividing it by the benchmark's upside capture return. **Downside capture ratio** measures manager's performance in down markets as defined by the named index. A down-market is defined as those periods (months or quarters) in which named index return is less than 0. In essence, it tells you what percentage of the down-market was captured by the manager. **Tracking error** is a measure of the volatility of excess returns relative to a benchmark.

Convertible Arbitrage involves buying convertible bonds and short selling their underlying equities to attempt to hedge against equity risk, while still providing the potential for upside returns. A **Covered Call Writing strategy** begins with a portfolio of stocks, most of which pay dividends. (Stock provisions include securities

convertible into the underlying stocks.) We then write (sell) calls and buy protective puts against a portion of this basket. A **call option** gives the buyer the right to purchase stocks at a predetermined strike price. If these securities rise above the strike price, the buyer may exercise the option and the fund (seller) must pay the buyer the difference as determined by the option contract. By writing calls on securities held in the portfolio, the fund can generate income from option premiums. A **put option** gives the purchaser the right to sell a security to the writer at a pre-determined price. Put options rise in value as the underlying securities decline in value. Through put options, the fund seeks to offset some of the risk of a potential decline in a portfolio holding.

Index Definitions

The Barclays U.S. Government/Credit Bond Index comprises long-term government and investment-grade corporate debt securities and is generally considered representative of the performance of the broad U.S. bond market. Unlike convertible bonds, U.S. Treasury bills are backed by the full faith and credit of the U.S. government and offer a guarantee as to the timely repayment of principal and interest. **The Citigroup 30-Day T-Bill Index** is generally considered representative of the performance of short-term money market instruments. **The S&P 500 Index** is generally considered representative of the U.S. stock market. **The Chicago Board Options Exchange Volatility Index (VIX)** shows the market's expectation of 30-day volatility by using the implied volatilities of a wide range of S&P 500 index options. Morningstar Market Neutral Category represent funds that attempt to eliminate the risks of the market by holding 50% of assets in long positions in stocks and 50% of assets in short positions.

Unmanaged index returns assume reinvestment of any and all distributions and, unlike fund returns, do not reflect fees, expenses or sales charges. Investors cannot invest directly in an index.

Additional Information

Past performance does not indicate future results. No investment strategy or objective is guaranteed and a client's account value can fluctuate over time and be worth more or less than the original investment. The opinions referenced are as of the date of publication and are subject to change due to changes in the market or economic conditions and may not necessarily come to pass. Information contained herein is for informational purposes only and should not be considered investment advice.

Important Fund Risk Information.

An investment in the Fund(s) is subject to risks, and you could lose money on your investment in the Fund(s). There can be no assurance that the Fund(s) will achieve its investment objective. Your investment in the Fund is not a deposit in a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation (FDIC) or any other government agency. The risks associated with an investment in the Fund(s) can increase during times of significant market volatility. The Fund(s) also has specific principal risks, which are described below. More detailed information regarding these risks can be found in the Fund's prospectus.

The principal risks of investing in the Market Neutral Income Fund include: equity securities risk consisting of market prices declining in general, convertible securities risk consisting of interest rate risk and credit risk, synthetic convertible instruments risk, convertible hedging risk, covered call writing risk, options risk, short sale risk, interest rate risk, credit risk, high yield risk, liquidity

risk, portfolio selection risk, and portfolio turnover risk. In addition, emerging markets may present additional risk due to potential for greater economic and political instability in less developed countries.

Covered Call Writing Risk: As the writer of a covered call option on a security, the fund foregoes, during the option's life, the opportunity to profit from increases in the market value of the security, covering the call option above the sum of the premium and the exercise price of the call. **Convertible Securities Risk:** The value of a convertible security is influenced by changes in interest rates, with investment value declining as interest rates increase and increasing as interest rates decline. The credit standing of the issuer and other factors also may have an effect on the convertible security's investment value. **Convertible Hedging Risk:** If the market price of the underlying common stock increases above the conversion price on a convertible security, the price of the convertible security will increase. The fund's increased liability on any outstanding short position would, in whole or in part, reduce this gain.

Before investing carefully consider the fund's investment objectives, risks, charges and expenses. Please see the prospectus and summary prospectus containing this and other information or call 1-800-582-6959. Read it carefully before investing.
