A negative alpha shows that the performance was less than expected given the risk. Beta is a historic measure of a fund's relative volatility, which is one of the measures of risk; a beta of 0.5 reflects 1/2 the market's volatility as represented by the fund's primary benchmark, while a beta of 2.0 reflects twice the volatility. R-squared is a mathematical measure that describes how closely a security's movement reflects movements in a benchmark. Sharpe ratio is a calculation that reflects the reward per each unit of risk in a portfolio. The higher the ratio, the better the portfolio's risk-adjusted return is.
