OVERALL MORNINGSTAR RATING™
Among 88 Convertible Bond - Global Funds
The Fund’s risk-adjusted returns based on load-waived Class I Shares USD Accumulating had 5 stars for 3 years, 5 stars for 5 years and 4 stars for 10 years of out of 88, 80 and 55 Convertible Bond - Global Funds, respectively, for the period ended 30/6/22.

OVERVIEW
The UCITS fund invests in global convertible securities, striving to balance risk/reward while providing growth and income.

KEY FEATURES
» Seeks to provide upside participation in equity markets with less exposure to downside than an equity-only portfolio over a full market cycle.
» Provides broadly diversified exposure to the global convertible bond universe by blending global investment themes and fundamental research via active management.
» Takes environmental, social and governance (ESG) factors into account, evaluating whether they impact a company’s cash flow, risk profile and long-term returns.

PORTFOLIO FIT
The fund’s portfolio of convertible securities can participate in upside equity movements with potentially limited downside exposure, providing a means to manage risk in conjunction with an equity allocation. The fund can also serve a role within a fixed income allocation, as convertible holdings have performed well during periods of rising interest rates and inflation.

Key Drivers of Performance
» For the quarter ended June 30, 2022, the Calamos Global Convertible Fund (I-shares USD accumulating) declined -15.61% and trailed the Refinitiv Global Convertible Bond Index (-14.69%) and Morningstar EAA Fund Convertible Bond - Global peer group (-13.99%).
» Global convertibles held up slightly better than the MSCI World Index (-16.05%) despite the fact their underlying stocks are well represented by small and medium sized growth companies, which significantly underperformed during the quarter.
» An overweight allocation and favorable selection within the consumer staples sector were supportive to the quarterly result, specifically an overweight position in agricultural products and strong selection in packaged foods & meats. An underweight allocation to the poorly performing materials sector also added value.
» Security selection in the real estate sector, notably in real estate operating companies, detracted from performance in the second quarter. An average underweight position and security selection within the financials sector also curbed the quarterly result. Names within the financial exchanges & data industry notably lagged.
» From a regional standpoint, the fund’s security selection in United States and Emerging Europe & South Africa benefited relative performance. On the other hand, selection in Europe and Emerging Latin America held back the return.

Market Overview
» The second quarter saw jarring turbulence in the global equity and convertible markets, which continued to be pressured by concerns related to high inflation, central bank policy, rising interest rates, the war in Ukraine, and supply chain disruptions.
» The global convertible market declined -14.69% in the second quarter, as reflected in the Refinitiv Global Convertible Bond Index, but held up well relative to the underlying stocks, which were down -26.62% on average.
» All economic sectors within the Refinitiv Global Convertible Bond Index lost ground during the second quarter. Energy (-5.1%), utilities (-7.6%) and financials (-11.2%) held up best, whereas materials (-18.9%) information technology (-17.2%) and consumer discretionary (-16.9%) lagged the most.
» Convertibles across all global regions also declined during the quarter. The regions that held up best included Emerging Latin America (-4.1%) and Emerging Asia (-6.9%), while the United States (-16.5%) and Canada (-16.4%) declined the most.
» Within the convertible index, convertibles with the most bond sensitivity held up best (-10.7%) and performed better than convertibles with more balanced risk/reward attributes (-14.2%) and the most equity sensitivity (-22.8%).
» Year-to-date issuance totaled $11.2 billion and represented the slowest first half to a calendar year since record keeping began in 1998.

<td>Meituan (MEI)</td>
<td>1.3%</td>
<td>Meituan is a Chinese shopping platform for local consumer products and services including entertainment, dining, delivery, travel and other retail services. Meituan was founded in 2003 and is headquartered in Beijing, China.</td>
<td>We view Meituan as a dominant and resilient market leader in secular growth areas of food delivery and in-store/local services. In an effort to leverage its technology, operational know-how and last-mile delivery capabilities, Meituan’s management is backing several new initiatives, including Select (community group buying) and InstaShopping (on-demand delivery of non-food items). The convertible offers a three-year put†, and its investment-grade rating should allow for downside risk mitigation while still providing upside in its common stock when China bounces back.</td>

<td></td>
<td></td>
</tr>
<tr>
<td>Snap, Inc. (SNAP)</td>
<td>1.3%</td>
<td>Snap, Inc. offers Snapchat, a camera application with various functionalities, such as camera, communication, snap map, stories, and spotlight enabling people to communicate visually through short videos and images. The company was formerly known as Snapchat, Inc. and changed its name to Snap, Inc. in September 2016. Snap, Inc. was founded in 2010 and is headquartered in Santa Monica, California.</td>
<td>Common Shares of SNAP fell in May after the company issued a profit that portended slower revenue growth amid a deteriorating macroeconomic environment. The company’s revenue growth had also decelerated in the first quarter given Apple’s iOS data privacy changes. We believe that Snap, Inc. has a critical foothold in the 13–34 demographic that is highly sought after by advertisers and expect the company’s recent platform improvements to open up new opportunities. The company has $5 billion in cash on its balance sheet and its debt is manageable given the low coupons on its convertible bonds. The 0.125% convertible due 2028 currently has low equity sensitivity but offers an attractive 6.25% yield to maturity.</td>
<td></td>

*As of 31/5/22
†A par put convertible is embedded with a par-strike put option prior to final maturity, enabling the holder to redeem the convertible at par value anytime during its life.
Positioning and Portfolio Changes

In the portfolio, we are focused primarily on maintaining an attractive risk/reward profile. Often, this involves increasing equity sensitivity after markets decline. However, we have not been aggressive in adding risk back in the wake of the most recent decline. We are looking for signs to do so, but do not believe we are there yet. Nonetheless, the fund’s equity sensitivity (or “delta”) is only modestly less than the global convertible market as measured by the Refinitiv Global Convertible Bond Index.

The fund’s biggest deviations from the market on an absolute basis remain an overweight to technology and an underweight to Europe. On a delta-adjusted basis, the fund’s technology weight is much closer to the market, but the underweight to Europe endures. The largest portfolio weights comprise information technology and consumer discretionary on an absolute basis. Conversely, energy and materials represent the smallest absolute sector weights with holdings. Conversely, we maintain overweight allocations to the application software and internet & direct marketing retail industries.

We maintain relative underweight positions in industrials and utilities. In these sectors, airlines and electric utilities constitute significant underweight industries, respectively.

Allocations to consumer discretionary and health care rose during the period with increased weights in internet & direct marketing retail and health care equipment. By contrast, allocations to real estate and materials decreased over the period with reductions to real estate operating companies and specialty chemicals.

From a regional standpoint, the fund’s largest weights are in the United States and Emerging Asia. Conversely, EMEA and Canada represent the smallest absolute weights. In comparison to the Refinitiv Global Convertible Bond Index, the fund has an overweight stance in Emerging Asia and Japan. We also maintain underweight allocations to Europe and the United States. Allocations to the United States rose during the period. By contrast, the allocations to EMEA decreased over the period with reductions to Israel.

Sector weightings are calculated as a percentage of net assets and exclude cash or cash equivalents. The Sector table Other row includes securities that do not have a sector classification, such as but not limited to government/sovereign bonds, mutual funds or index options.

**Outlook**

The second quarter extended 2022’s volatility as investors remained concerned about a myriad of factors including high inflation, central bank policy, rising interest rates, high energy prices, the war in Ukraine, and supply chain disruptions. While convertibles performed more in line with broader equity indices like the MSCI World Index, they also demonstrated their defensive attributes, participating in just 55% of their underlying stocks’ decline. Currently, more than 73% of the global convertible market is priced below par, which means that convertibles are priced much closer to their bond floor today than they were at the beginning of the downturn. While it’s difficult to call a market bottom, we are clearly closer to the bottom now than at the beginning of the year. When the equity markets rebound, we expect convertibles to pick up some of the upside equity opportunity. Should the markets continue to test a bottom, convertibles are more defensively positioned.

Selectively, we also see opportunities in these below-par convertibles given that the global convertible market has a relatively short, adjusted duration of less than 3 years. Given the ability to put these convertibles back to their issuer at par at maturity, provides an attractive return opportunity irrespective of any additional upside equity move.

*Parity delta is a measure of equity sensitivity showing the relationship between a points change in conversion parity and corresponding expected point change in convertible price.*
