

Calamos Global Convertible Strategy

CALAMOS
INVESTMENTS

STRATEGY OVERVIEW

A global convertible strategy that leverages Calamos' capital structure research by investing predominantly in a portfolio of global convertible securities, in order to generate consistent alpha and manage downside volatility. The strategy seeks to outperform the Refinitiv Global Convertible Bond Index.

KEY FEATURES

- » In-depth capital structure analysis
- » Rigorous top-down and fundamental research
- » Proprietary credit and convertible research
- » Team approach to management

PORTFOLIO MANAGEMENT

- » Eli Pars, CFA, Co-CIO, Head of Alternative Strategies, Co-Head of Convertible Strategies, and Senior Co-Portfolio Manager
- » Jon Vacko, CFA, Senior Vice President, Senior Co-Portfolio Manager
- » Joe Wysocki, CFA, Senior Vice President, Senior Co-Portfolio Manager

The team leverages the insights and analysis of the Calamos Investment Committee, as well as dedicated research, risk management, trading, and portfolio specialist team support.

SINCE INCEPTION UP/DOWN CAPTURE VS. BENCHMARK

¹Country Weightings are classified according to the company country of domicile.

²Regional Weightings and Sector Weightings are calculated as a percentage of net assets and exclude cash or cash equivalents, any government / sovereign bonds or broad-based index hedging securities the portfolio may hold. The Sector table Other row includes securities that do not have a sector classification.

³All risk-adjusted statistics are relative to the benchmark on an annualized basis versus the composite. Source: Calamos Advisors LLC.

⁴Credit quality of bonds reflects the higher of the ratings of Standard & Poor's Corp. and Moody's Investment Service Inc. Ratings are relative, subjective and not absolute standards of quality, represent the opinions of the independent, Nationally Recognized Statistical Rating Organizations (NRSRO), and are adjusted to the Standard & Poor's scale shown. Ratings are measured using a scale that typically ranges from AAA (highest) to D (lowest). The table excludes equity securities, cash and cash equivalents.

⁵Strategy Assets reflect all assets that are currently being managed (collectively) under the strategy, which may contain multiple performance composites.

The results portrayed on this page are for the Global Convertible Strategy and as such only relate to the representative portfolio shown at that point in time. Other portfolios will vary in composition, characteristics, and will experience different investment results. The representative portfolio shown has been selected by the advisor based on account characteristics that the advisor feels accurately represents the investment strategy as a whole.

Returns and Risk/Rewards statistics presented reflect the Calamos Global Convertible Composite which is an actively managed composite investing primarily in a globally diversified portfolio of convertible securities. The Composite includes all fully

discretionary fee paying accounts, including those no longer with the Firm. The Composite was created May 15, 2008, calculated with an inception date of October 1, 2001.

Fees include the investment advisory fee charge by Calamos Advisors LLC. Returns greater than 12 months are annualized. Chart Data Sources: Calamos Advisors LLC.

Average annual total return measures net investment income and capital gain or loss from portfolio investments as an annualized average. All performance shown assumes reinvestment of dividends and capital gains distributions.

Alpha is a measurement of performance on a risk-adjusted basis. A positive alpha shows that performance of a portfolio was higher than expected given the risk. A negative alpha shows that the performance was less than expected given the risk.

Beta is a measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole.

Standard deviation is a measure of volatility.

Information ratio is the measurement of the performance returns of a portfolio against the performance volatility of an index or benchmark. The information ratio is generally used as a gauge to measure the ability of a portfolio to generate excess returns of the index or benchmark.

Sharpe ratio is a calculation that reflects the reward per each unit of risk in a portfolio. The higher the ratio, the better the portfolio's risk-adjusted return is.

Upside semivariance is a measure of upside potential based on gains dispersed above a mean value.

Downside semivariance is a measure of downside risk based on losses dispersed below a mean value.

Foreign (Non-US) Securities Risks: Risks associated with investing in foreign (non-US) securities include fluctuations in the exchange rates of foreign currencies that may affect the US dollar value of a security, the possibility of substantial price volatility as a result of political and economic instability in the foreign

country, less public information about issuers of securities, different securities regulation, different accounting, auditing and financial reporting standards and less liquidity than in US markets.

Convertible securities risk. The value of a convertible security is influenced by changes in interest rates, with investment value declining as interest rates increase and increasing as interest rates decline. The credit standing of the issuer and other factors also, may have an effect on the convertible security's investment value.

The Refinitiv Global Convertible Bond Index is designed to broadly represent the global convertible bond market.

Unmanaged index returns, unlike fund returns, do not reflect fees, expenses or sales charges. Investors cannot invest directly in an index.

The information provided in this page should not be considered a recommendation to purchase or sell any particular security. There is no assurance that any securities discussed herein will remain in an account's portfolio at the time you receive this report or that securities sold have not been repurchased. The securities discussed do not represent an account's entire portfolio and in the aggregate may represent only a small percentage of an account's portfolio holdings. Ten Largest Holdings exclude any government/sovereign bonds or broad-based index hedging securities the portfolio may hold.
