¹Country Weightings are classified according to the company country of domicile.

²Regional Weightings and Sector Weightings are calculated as a percentage of net assets and exclude cash or cash equivalents, any government / sovereign bonds or broad-based index hedging securities the portfolio may hold. The Sector table Other row includes securities that do not have a sector classification.

³All risk-adjusted statistics are relative to the benchmark on an annualized basis versus the composite. Source: Calamos Advisors LLC.

⁴Strategy Assets reflect all assets that are currently being managed (collectively) under the strategy, which may contain multiple performance composites.

Market Capitalization statistics are based on common stock

noldings.
The results portrayed on this page are for the Global Growth
Strategy and as such only relate to the representative portfolio
shown at that point in time. Other portfolios will vary in
composition, characteristics, and will experience different
investment results. The representative portfolio shown has been
selected by the advisor based on account characteristics that the
advisor feels accurately represents the investment strategy as a
whole

whole.

Returns presented reflect the Calamos Global Growth
Composite which is an actively managed composite primarily
investing in a globally-diversified portfolio of equity securities.
The Composite was created March 22, 2007 calculated with an
inception date of April 1, 2007 and includes all fully discretionary
accounts, including those no longer with the Firm.

Unmanaged index returns, unlike fund returns, do not reflect
fees, expenses or sales charges. Investors cannot invest directly in
an index

An index.
Fees include the investment advisory fee charge by Calamos Advisors LLC. Returns greater than 12 months are annualized. Chart Data Sources: Calamos Advisors LLC.
Average annual total return measures net investment income and capital gain or loss from portfolio investments as an annualized average. All performance shown assumes reinvestment of dividends and capital gains distributions.

Alpha is a measurement of performance on a risk-adjusted basis. A positive alpha shows that performance of a portfolio was higher than expected given the risk. A negative alpha shows that the performance was less than expected given the risk.

Beta is a measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole.

Standard deviation is a measure of volatility.

Information ratio is the measurement of the performance returns of a portfolio against the performance volatility of an index or benchmark. The information ratio is generally used as a gauge to measure the ability of a portfolio to generate excess returns of the index or benchmark.

Sharpe ratio is a calculation that reflects the reward per each

Sharpe ratio is a calculation that reflects the reward per each unit of risk in a portfolio. The higher the ratio, the better the portfolio's risk-adjusted return is.

Upside semivariance is a measure of upside potential based on gains dispersed above a mean value.

Downside semivariance is a measure of downside risk based on losses dispersed below a mean value.

losses dispersed below a mean value.

Foreign (Non-US) Securities Risks: Risks associated with investing in foreign (non-US) securities include fluctuations in the exchange rates of foreign currencies that may affect the US dollar value of a security, the possibility of substantial price volatility as a result of political and economic instability in the foreign country, less public information about issuers of securities, different securities regulation, different accounting, auditing and financial reporting standards and less liquidity than in US markets

markets.

Geographic Risks: From time to time, based on market or economic conditions, certain strategies could invest a significant portion of its assets in one country or geographic region. If a strategy does so, there is a greater risk that economic, political, social and environmental conditions in that particular country or geographic region will have a significant impact on performance and performance will be more volatile than the performance of more geographically diversified accounts. The economies and financial markets of certain regions can be highly interdependent and could decline all at the same time. In addition, certain areas are prone to natural disasters such as earthquakes, volcanoes, droughts or tsunamis and are economically sensitive to

environmental events. Alternatively, the lack of exposure to one or more countries or geographic regions could adversely affect performance.

Growth Investing Risks: Growth companies are generally more susceptible than established companies to market events and sharp declines in value. Additionally, growth stocks typically lack the dividend yield that can cushion stock prices in market downturns. downturns.

downturns.

Equity Securities Risk: The securities markets are volatile, and the market prices of the securities may decline generally. The price of equity securities fluctuates based on changes in a company's financial condition and overall market and economic conditions. If the market prices of the securities owned fall, the value of your investment will decline.

The MSCI ACWI Index is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of developed markets and emerging markets.

markets.
