

# Calamos US Opportunities Strategy

CALAMOS<sup>®</sup>  
INVESTMENTS

## STRATEGY OVERVIEW

A lower-volatility equity strategy that leverages Calamos' capital structure research by investing in equities and equity-sensitive securities of growth companies, in order to generate alpha and manage downside volatility versus the S&P 500 Index over a full market cycle.

## KEY FEATURES

- » In-depth capital structure analysis
- » Rigorous top-down and fundamental research
- » Broader opportunity set to generate alpha and manage risk
- » Team approach to management

## PORTFOLIO MANAGEMENT

- » John Hillenbrand, CPA, Co-CIO, Head of Multi-Asset Strategies, Co-Head of Convertible Strategies, and Senior Co-Portfolio Manager
- » Eli Pars, CFA, Co-CIO, Head of Alternative Strategies, Co-Head of Convertible Strategies, and Senior Co-Portfolio Manager
- » Jon Vacko, CFA, Senior Vice President, Senior Co-Portfolio Manager
- » Joe Wysocki, CFA, Senior Vice President, Senior Co-Portfolio Manager

The team leverages the insights and analysis of the Calamos Investment Committee, as well as dedicated research, risk management, trading, and portfolio specialist team support.

## SINCE INCEPTION UP/DOWN CAPTURE VS. BENCHMARK

<sup>1</sup>Sector Weightings are calculated as a percentage of net assets and exclude cash or cash equivalents, any government / sovereign bonds or broad-based index hedging securities the portfolio may hold. The Sector table Other row includes securities that do not have a sector classification.

<sup>2</sup>All risk-adjusted statistics are relative to the benchmark on an annualized basis versus the composite. Source: Calamos Advisors LLC.

<sup>3</sup>Strategy Assets reflect all assets that are currently being managed (collectively) under the strategy, which may contain multiple performance composites.

The results portrayed on this page are for the US Opportunities Strategy and as such only relate to the representative portfolio shown at that point in time. Other portfolios will vary in composition, characteristics, and will experience different investment results. The representative portfolio shown has been selected by the advisor based on account characteristics that the advisor feels accurately represents the investment strategy as a whole.

Returns and Risk/Reward statistics presented reflect the Calamos US Opportunities Composite, which is an actively managed composite investing in equity, convertible and fixed-income securities seeking long-term total return through growth and current income. The Composite was created August 31, 2013 calculated with an inception date of January 1, 1991 and includes all fully discretionary, fee paying accounts, including those no longer with the Firm.

Fees include the investment advisory fee charge by Calamos Advisors LLC. Returns greater than 12 months are annualized. Chart Data Sources: Calamos Advisors LLC.

Average annual total return measures net investment income and capital gain or loss from portfolio investments as an annualized average. All performance shown assumes reinvestment of dividends and capital gains distributions.

Alpha is a measurement of performance on a risk-adjusted basis. A positive alpha shows that performance of a portfolio was higher than expected given the risk. A negative alpha shows that the performance was less than expected given the risk.

Beta is a measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole.

Standard deviation is a measure of volatility. Information ratio is the measurement of the performance returns of a portfolio against the performance volatility of an index or benchmark. The information ratio is generally used as a gauge to measure the ability of a portfolio to generate excess returns of the index or benchmark.

Sharpe ratio is a calculation that reflects the reward per each unit of risk in a portfolio. The higher the ratio, the better the portfolio's risk-adjusted return is.

Upside semivariance is a measure of upside potential based on gains dispersed above a mean value.

Downside semivariance is a measure of downside risk based on losses dispersed below a mean value.

Convertible Securities Risks: The value of a convertible security is influenced by changes in interest rates, with investment value declining as interest rates increase and increasing as interest rates decline. The credit standing of the issuer and other factors also may have an effect on the convertible security's investment value.

Equity Securities Risk: The securities markets are volatile, and the market prices of the securities may decline generally. The price of equity securities fluctuates based on changes in a company's financial condition and overall market and economic conditions. If the market prices of the securities owned fall, the value of your investment will decline.

S&P 500 Index is generally considered representative of the US stock market.

Unmanaged index returns, unlike fund returns, do not reflect fees, expenses or sales charges. Investors cannot invest directly in an index.

The information provided in this page should not be considered a recommendation to purchase or sell any particular security. There is no assurance that any securities discussed herein will remain in an account's portfolio at the time you receive this report or that securities sold have not been repurchased. The securities discussed do not represent an account's entire portfolio and in the aggregate may represent only a small percentage of an account's portfolio holdings. Ten Largest Holdings exclude any government/sovereign bonds or broad-based index hedging securities the portfolio may hold.
