

Small Cap Market Snapshot

DATA AS OF 7/31/2021

WHAT'S NEW

Those pesky yields...The 10-year Treasury yield continued its downward trend in July, triggering additional rotation away from small caps into large caps, especially large cap growth stocks. For the month, small caps lagged large caps by a whopping 569 basis points (Russell 2000 less Russell 1000), marking July as the fifth consecutive month of large cap outperformance.

The good news is that small caps keep getting cheaper and, importantly, not because fundamentals are weak. Small cap valuation relative to large caps is down to the 16th percentile—historically, an excellent entry point. Combine that with the fact that when small caps rise over 10% during the first six months of the year (Russell 2000 up 17.5% in 1H:21—check!), they tend to continue rising in the second half of the year, on average by another 12%. Where I come from, that's called a coiled spring.

The **S&P 500 Growth Index** measures growth stocks using three factors: sales growth, the ratio of earnings change to price, and momentum. S&P Style Indices divide the complete market capitalization of each parent index into growth and value segments. Constituents are drawn from the S&P 500. **Standard deviation** is a measure of volatility. **Sharpe ratio** is a calculation that reflects the reward per each unit of risk in a portfolio. The higher the ratio, the better the portfolio's risk-adjusted return is.
