

Small Cap Market Snapshot

DATA AS OF 11/30/2021

WHAT'S NEW

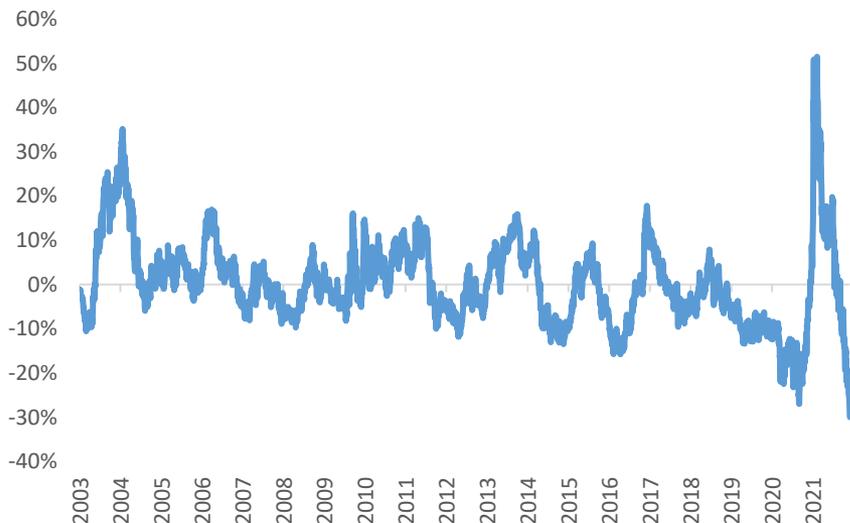

A bad seven days...Small caps were even with large caps during November until the final seven trading days of the month when the omicron variant fears ramped. That macro concern caused small caps to lag large caps by 283 basis points (Russell 2000 less Russell 1000) during the month.

Between the virus fears, recent hawkish comments from Fed Chairman Powell, interest rate volatility, tax loss selling, and fierce sector and industry rotation, it's been anything but a quiet holiday season thus far. Yes, there is day-to-day noise, but it's important to ponder the favorable short-, intermediate-, and long-term set-up for small caps from here. High relative growth, positive earnings and sales revisions, extremely low relative valuations, and seasonal tailwinds for the next three months. This is a rare and powerful alignment of stars that has the potential to lead to outsized relative returns.

Brandon M. Nelson, CFA, Calamos Senior Portfolio Manager

Information contained herein is for informational purposes only and should not be considered investment advice. The **S&P 500 Index** is a market-value weighted index consisting of 500 stocks chosen for market size, liquidity, and industry group representation. It is widely regarded as the standard for measuring US stock-market performance. The **Russell 1000 Index** measures the performance of the large-cap segment of the US equity universe and includes approximately 1000 of the largest securities based on a combination of their market cap and current index membership. The **Russell 2000 Index** measures the performance of the 2,000 smallest companies in the Russell 3000 Index, which represents approximately 8% of the total market capitalization of the Russell 3000 Index. You cannot invest directly in an index. The **Russell 2000 Growth Index** measures the performance of the small-cap growth segment of the US equity universe. It includes those Russell 2000 companies with higher price-to-value ratios and higher forecasted growth values. The Russell 2000 Growth Index is published and maintained by FTSE Russell. The **Russell 2000 Value Index** measures the performance of small-cap value segment of the US equity universe. It includes those Russell 2000 companies with lower price-to-book ratios and lower forecasted growth values. The **Russell Microcap Index** measures the performance of the microcap segment of the US equity market. Microcap stocks make up less than 3% of the US equity market (by market cap) and consist of the smallest 1,000 securities in the small-cap Russell 2000® Index, plus the next 1,000 smallest eligible securities by market cap. The **Russell Microcap Growth Index** measures the performance of the microcap growth segment of the US equity market. It includes Russell Microcap companies that are considered more growth oriented relative to the overall market as defined by Russell's leading style methodology. The **Russell Microcap Value Index** measures the performance of the microcap value segment of the US equity market. It includes Russell Microcap companies that are considered more value oriented relative to the overall market as defined by Russell's leading style methodology.

SMALL CAP GROWTH AS A DIVERSIFIER

The portfolio effect of increasing exposure to small caps

Data from 12/1/2001 to 11/30/2021

	Annualized Return	Standard Deviation	Sharpe Ratio	Excess Return
100% LARGE CAP EQUITY S&P 500	9.33%	14.62%	0.60	0.00%
90% LARGE CAP/10% SMALL CAP GROWTH	9.38%	14.91%	0.59	0.05%
80% LARGE CAP/20% SMALL CAP GROWTH	9.42%	15.26%	0.59	0.09%
100% SMALL CAP GROWTH Russell 2000 Index	9.57%	19.53%	0.50	0.24%

The **S&P 500 Growth Index** measures growth stocks using three factors: sales growth, the ratio of earnings change to price, and momentum. S&P Style Indices divide the complete market capitalization of each parent index into growth and value segments. Constituents are drawn from the S&P 500. **Standard deviation** is a measure of volatility. **Sharpe ratio** is a calculation that reflects the reward per each unit of risk in a portfolio. The higher the ratio, the better the portfolio's risk-adjusted return is.
