WHAT'S NEW

After an exceptionally strong December, small caps pulled back modestly in January, falling 3.89% and underperforming large caps by 528 basis points (Russell 2000 versus Russell 1000). Positive generative AI data points during the month seemed to disproportionately benefit large caps, especially large cap growth stocks, which continued their amazing run during the month.

Will small caps reverse the trend and finally outperform large caps this year? Although more people are calling for this scenario, the situation is complicated. We know small caps tend to perform especially well after fed funds rate cuts, but when will those rate cuts begin? The stock and bond markets wrestle with this question every day. No one knows the answer with certainty, but at this point, cuts seem likely to occur sometime in 2024. This easing, combined with an extremely low relative valuation (8th percentile), seems to suggest positioning toward small caps makes sense.

Information contained herein is for informational purposes only and should not be considered investment advice. The **S&P 500** Index is a market-value weighted index consisting of 500 stocks chosen for market size, liquidity, and industry group representation. It is widely regarded as the standard for measuring US stock-market performance. The **Russell 1000 Index** measures the performance of the large-cap segment of the US equity universe and includes approximately 1000 of the largest securities based on a combination of their market cap and current index membership. The **Russell 2000 Index** measures the performance of the 2,000 smallest companies in the Russell 3000 Index, which represents approximately 8% of the total market capitalization of the Russell 3000 Index. You cannot invest directly in an index. The **Russell 2000 Growth** Index measures the performance of the small-cap growth segment of the US equity universe. It includes those Russell 2000 companies with higher price-to-value ratios and higher forecasted growth values. The Russell 2000 Growth Index is published and maintained by FTSE Russell. The **Russell 2000 Value** Index measures the performance of small-cap value segment of the US equity universe. It includes those Russell 2000 companies with lower price-to-book ratios and lower forecasted growth values. The **Russell Microcap** Index measures the performance of the microcap segment of the US equity market. Microcap stocks make up less than 3% of the US equity market (by market cap) and consist of the smallest 1,000 securities in the small-cap Russell 2000® Index, plus the next 1,000 smallest eligible securities by market cap. The **Russell Microcap Growth** Index measures the performance of the microcap growth segment of the US equity market. It includes Russell Microcap companies that are considered more growth oriented relative to the overall market as defined by Russell's leading style methodology. The **Russell Microcap Value** Index measures the performance of the microcap value segment of the US equity market. It includes Russell Microcap companies that are considered more value oriented relative to the overall market as defined by Russell's leading style methodology.
