WHAT'S NEW

Small caps continued to grind higher in March, rising 3.58% and outperforming large caps for the second consecutive month – this time, by 37 basis points (as measured by the Russell 2000 versus Russell 1000).

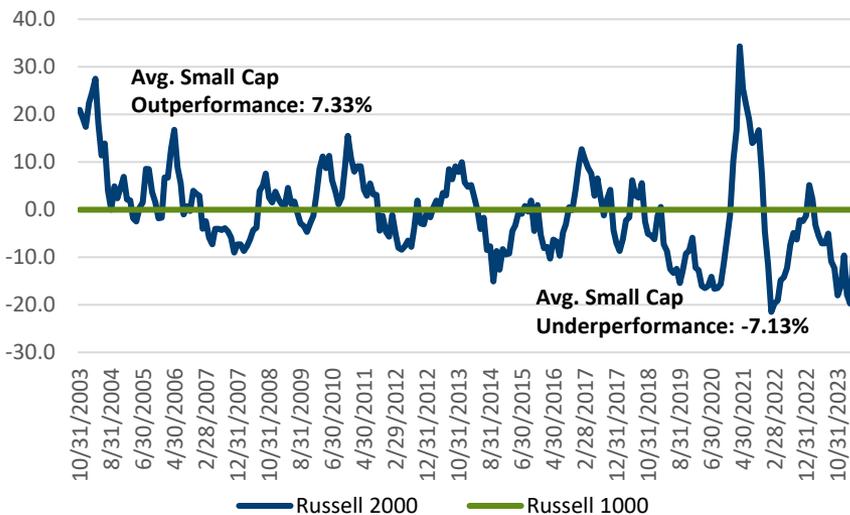

While large caps have outperformed small caps in recent years, stretching valuations of that relationship to the 10th percentile, many are predicting that market leadership will shift toward smaller companies in a more meaningful way (two months is barely a trend). For this to happen more convincingly, we'll need greater confidence that the Federal Reserve will indeed cut interest rates in 2024, which, in turn, necessitates additional disinflationary data points.

In the meantime, there is strong evidence that company-specific data points matter more to stock price movements. In other words, macro and micro both matter, which is a change from the last couple of years when macro dominated. In our opinion, this is a healthy development and a sign that things have settled down a bit, which is good for markets overall.

Information contained herein is for informational purposes only and should not be considered investment advice. The **S&P 500** Index is a market-value weighted index consisting of 500 stocks chosen for market size, liquidity, and industry group representation. It is widely regarded as the standard for measuring US stock-market performance. The **Russell 1000 Index** measures the performance of the large-cap segment of the US equity universe and includes approximately 1000 of the largest securities based on a combination of their market cap and current index membership. The **Russell 2000 Index** measures the performance of the 2,000 smallest companies in the Russell 3000 Index, which represents approximately 8% of the total market capitalization of the Russell 3000 Index. You cannot invest directly in an index. The **Russell 2000 Growth** Index measures the performance of the small-cap growth segment of the US equity universe. It includes those Russell 2000 companies with higher price-to-value ratios and higher forecasted growth values. The Russell 2000 Growth Index is published and maintained by FTSE Russell. The **Russell 2000 Value** Index measures the performance of small-cap value segment of the US equity universe. It includes those Russell 2000 companies with lower price-to-book ratios and lower forecasted growth values. The **Russell Microcap** Index measures the performance of the microcap segment of the US equity market. Microcap stocks make up less than 3% of the US equity market (by market cap) and consist of the smallest 1,000 securities in the small-cap Russell 2000® Index, plus the next 1,000 smallest eligible securities by market cap. The **Russell Microcap Growth** Index measures the performance of the microcap growth segment of the US equity market. It includes Russell Microcap companies that are considered more growth oriented relative to the overall market as defined by Russell's leading style methodology. The **Russell Microcap Value** Index measures the performance of the microcap value segment of the US equity market. It includes Russell Microcap companies that are considered more value oriented relative to the overall market as defined by Russell's leading style methodology.
