The Goal: Fundamental Momentum

Transcript of a video recorded on August 23, 2019

Behan: This fundamental research that you perform on the companies that you own—is that a core part of the process?

Nelson: It’s a critical part of the process. We spend most of our time trying to find fundamental momentum within a company—and you can break up that term “fundamental momentum” into sustainable growth and underestimated growth. We spend almost all of our time researching companies by having conversations with management and digging into that element of it.

As it relates to sustainable growth, we’re going to try to understand the addressable market. Is it a large market? We’re also going to look at other factors. Is the company investing enough in the sales force? Are they investing enough in research and development and planting seeds to grow the business further?

In terms of the underestimated growth part of the analysis, we’re going to look at what is management’s history of communicating with investors and speaking with analysts. Do they have a track record of meeting and exceeding expectations that are out there?

We’ll study that history, we’ll have conversations with management to try to gauge how important this idea of communicating with analysts and investors is. And that will determine whether we think there’s a high probability that they’re going to meet or exceed analyst expectations going forward.

Again, breaking it down to sustainable growth and underestimated growth, you really want to have both of those working for you. If you have one without the other, you might be OK. But if you have both of those, where they’re good operators and have a sustainable growth profile and they know how to manage communications with the outside world, that’s when you tend to get the most valuation expansion, when the companies can execute quarter after quarter after quarter, meeting and exceeding expectations.
The stock market investment world gets excited when they can see a company execute well and show that upside surprise on a consistent basis and also have high growth rates at the same time.

The only requirement we have is that at least one analyst writes research on the company, so there’s at least something that can represent a proxy for what market expectations are. We’re not relying on that analyst to be good at their job per se. We’re just using them as a proxy, as a benchmark essentially for having something to compare to when the quarterly results come out.

So, all else being equal, it is better to have fewer analysts cover a stock. We like that characteristic. We don’t actually go looking for that, but we’re happy when we stumble upon that. That in and of itself—getting increased analyst exposure—can act as a catalyst to that stock’s performance. It’s sort of “the cherry on top” when it comes to trying to find investment ideas.

But, what we’re really looking for, what we think is more important is, again, that sustainable growth profile and underestimated growth profile.

Important Risk Information. An investment in the Fund(s) is subject to risks, and you could lose money on your investment in the Fund(s). There can be no assurance that the Fund(s) will achieve its investment objective. Your investment in the Fund(s) is not a deposit in a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation (FDIC) or any other government agency. The risks associated with an investment in the Fund(s) can increase during times of significant market volatility. The Fund(s) also has specific principal risks, which are described below. More detailed information regarding these risks can be found in the Fund’s prospectus.

It should not be assumed that any of the securities transactions or holdings discussed were or will prove to be profitable, or that the investment recommendations or decisions we make in the future will be profitable or will equal the investment performance of the securities discussed herein.

The principal risks of investing in the Calamos Timpani Small Cap Growth Fund include: equity securities risk consisting of market prices declining in general, growth stock risk consisting of potential increased volatility due to securities trading at higher multiples, and portfolio selection risk.

The Fund invests in small capitalization companies, which are often more volatile and less liquid than investments in larger companies. As a result of political or economic instability in foreign countries, there can be special risks associated with investing in foreign securities, including fluctuations in currency exchange rates, increased price volatility and difficulty obtaining information. In addition, emerging markets may present additional risk due to potential for greater economic and political instability in less developed countries.

Active management does not guarantee investment returns or eliminate the risk of loss. It should not be assumed that any securities mentioned in this recording will be profitable or experience equal performance in the future.
